Azurro	<i>violet with purple eyelet</i>	C5	25-35	5,70
Very expressive colour. Intensive dark violet flowers with big dark eyelet. Blooming time at the end of May. Medium-strong growth. Hardy to -26°C.				

VARIETY	FLOWER	CONT.	HEIGHT	PRICE Euro
All shrubs with flower buds				
Bariton Shrubs are decorated with magnificent and wide open flowers, with an extensive almost black eye. The shrub grows compactly, not very strongly. At the age of 10 years the shrub reaches the height of 130-150 cm. Frost resistance -20°C.	<i>violet with big eyelet</i>	C5 C15	25-35 40-60	5,70 14,50
Belkanto® The variety with unique colour yellow-orange and waved, orange-red edges of petals. The flowers bloom from the second half of May to the first week of June. Strong, wide growing shrub. Hardy to -22°C.	<i>orange</i>	C15	40-60	14,50
Bernstein dichroanthum Shell pink buds open to pale bright yellow flowers in May to June. A new variety. Grows wide, quite loosey. During frosty winter upper shrub may damage. Frost resistance -22°C.	<i>light cream- brown</i>	C5	25-35	5,70
Blutopia Strong growing variety, hardy to -24°C. The flowers in violet with olive-green fleck and light waved edges. Blooming time at the end of May.	<i>violet with olive-green eyelet</i>	C5 C15	25-35 40-60	5,70 14,50
Bolesław Chrobry® NOVELTY! Purple flowers with a delicate, brown eyelet. This variety grows intensively, has a dense habit. Elongated leaves, turned up slightly. Frost resistance up to -30°C.	<i>violet with light brown eyelet</i>	C5	25-35	7,20
Brasilia wardii Orange variety. Orange-yellow wavy flowers, gathered in dense flower heads. Slow dense growth. From our observations it follows that these bushes are the most frost-resistant in this variety. Frost resistance -20°C.	<i>orange-pink</i>	C5 C15	25-35 40-60	5,70 14,50
Brigitte insigne Flowers with pink edges, lighter inwards, in the centre – white with olive-green eyelet. Slow growing variety. 15-year old shrubs grow 110 cm tall and 160 cm wide. The flowers bloom at the end of May, beginning of June. Hardy to -21°C.	<i>cream- pink</i>	C5 C15	25-35 40-60	5,70 14,50
Brisanz- heamatodes Sensational new variety! Purely red flowers, free of any violet addition. Unlike other red varieties, this one grows slowly and densely. Propagates and thickens well. Blooms early, at the same time as the Rh. repens variety. Frost resistance -22°C.	<i>red</i>	C5 C15	25-35 40-60	5,70 14,50
Burgundula Splendid, dark-violet colour of the flowers with a large, nearly black eye. Apart from 'Polarnacht' – this is the darkest of all varieties. Strong growth. Frost resistance -22°C.	<i>dark violet</i>	C15	40-60	14,50
Busuki Super new in the red varieties. The sharp red colour of the flowers will not let you simply pass by the blooming bushes which grow not too strongly, densely, and propagate well. Characteristic leaves – lengthened, pointed leaves with light edges and visible veins. Frost resistance -26°C.	<i>red</i>	C5	25-35	5,70
Calsap White flowers with big, purple eyelet are characteristic for this variety. Wide, loose shrub habit, strong growth. Flowering at the turn of May/June. Frost resistance -30°C.	<i>white with purple eyelet</i>	C5	25-35	5,70
Cassata® New variety with very attractive flowers. Light pink- lilac flowers are darker on the edges. There is a big, dotted dark red eyelet on the upper petal, that turns into crimson in the inside. Flowering in the second half of May. Frost resistance -24°C.	<i>light lilac</i>	C5 C15	25-35 40-60	5,70 14,50
Catawbiense Album Standard strongly growing variety, the shrubs' habit is typical of rhododendrons. Pure white flowers with olive-coloured spot. Very healthy variety with high frost resistance -30°C.	<i>white</i>	C5 C15	25-35 40-60	5,70 14,50
Catawbiense Grandiflorum Strong growing variety. Flowers at the beginning of June are light lilac. Full frost hardy to -30°C. Well known and friendly plants.	<i>dark lilac</i>	C5 C15 C35	30-40 50-70 70-90	5,70 14,50 33,50
Cheer One attraction of this variety is its frequent partial blooming in autumn. Light pink flowers. The shrub grows not very strongly, broadly. Frost resistance -22°C.	<i>light pink</i>	C5	25-35	5,70

VARIETY	FLOWER	CONT.	HEIGHT	PRICE Euro
All shrubs with flower buds

AZALEAS

Knapp – Hill, Mollis, Ghent and other strongly growing azaleas.

This is a group of shrubs with fabulously colourful flowers. With their lesser requirements they settle for much worse habitat conditions. At the age of 10 years they reach the height of 1 – 1,5 m.

Splendid enormous flowers with wavy petal edges, orange, red, and pink in colour – these are the characteristics that distinguish the Knapp-Hill azaleas. The beauty of the other varieties is in no way second to that of the of the foregoing group. They include shrubs with smaller but fragrant flowers or building wonderful “pompon” inflorescence.

BLUEBERRY

(*Vaccinium corymbosum*)

**** varieties available from Autumn 2015

The blueberry plants are very well rooted, hardened off and well-branched from the very plant shoot. Bushes are produced by the micro-cutting method developed in our nursery. Frost hardiness follows Brazelton 2000.

Varieties produced under license:

Aurora[®], Draper[®], Liberty[®]****

2-year old C2 35-45 2,70

The material in the varieties Aurora, Draper, Liberty in C2 container is offered exclusively for plantation. The referenced varieties are covered by our Dutch partner blueberry nursery - producer's license. The license fee is 0.50 €.

VARIETY	CONT.	HEIGHT	PRICE Euro
Varieties are presented in order of fruiting time			
Chanticleer****			
NOVELTY!	2-year old	C2	35-45 2,70
Very fertile variety of average growth strength and upright habit. Fruit - medium size, sweet and sour. One of the earliest maturing varieties of blueberries with a long period of fruiting. Blooms late, after the spring frost.			
Earliblue****	2-year old	C2	35-45 2,70
Strong and wide growth of shrubs. The variety ripening very early – in the beginning of July. Great and medium, very tasty fruits covered with intensive, blue wax coating. The fruits from later crops tend to be tiny. Good point of this variety is abundant fructification and sufficient hardiness.			
Duke****	2-year old	C2	35-45 2,70
The fruits begin to mature in second week of July. Good fructification. Growth of plants strong, loose, spherical sort. For good bearing fruit one should regularly illuminate. Collected into circles, firm, very tasty, covered with the intense waxy bloom fruits of the diversified size. It fits for the processing as well as to the direct consumption. According to American data comparable to the Bluecrop variety. In countries of western Europe found at present best, early bearing fruit variety.			
Spartan****	2-year old	C2	35-45 2,70
The fruits begin to mature few days after Earliblue variety. Big, dark blue very tasty fruits covered with wax- coating. Vinous- sweet greenish flesh. The shrubs grow very strong and are frost hardy. The variety requires good fertilization.			
Patriot****	2-year old	C2	35-45 2,70
American novelty, very promising in our climate. The shrubs grow 120-180 cm tall, the sprouts are raised. The fruits begin to mature in the beginning of July. The fruitfulness amounts to 4.5-9 kg / shrub. Great fruits, 49 berries/0.25 l, tasty, with strong skin and high quality. First berries are manually picked. Later on the berries may be mechanically picked. The fruits from later crops are smaller, 60 berries/0.25 l. This variety grows better on sunny and warm stands, then crops are greater with better quality. They are suitable for industrial and amateur plantings. Frost hardy to -34°C. <i>It is assumed to be resistant to Phytophthora</i>			
Bluejay	2-year old	C2	35-45 2,70
Strong growing variety. Spreading shrub habit of elder plants. Quite big, light blue, aromatic fruits gathered in loose clusters. The variety ripening at similar time as Bluecrop. The berries can be mechanically picked which is one of the best points of this variety. Sufficient frost and disease hardiness. Requires frequent cutting and watering.			
Goldtraube	2-year old	C2	35-45 2,70
Delicious blueberry variety, blooms in mid-summer. Perfect for freezing, does not lose the flavour. The fruit does not dirty your mouth. Grows better when there are a few of them around. Fast-growing variety with fruit larger than the average blueberries.			
Toro	2-year old	C2	35-45 2,70
New variety with big and very aromatic fruits, maturing in the same time. Fruits begin maturing in the end of second week in July. Fruits grow loosey in long coatings, looks similar to bunch of grapes. Very promising variety. The fruits are known as the best for straight consumption. Suitable for industrial plantings and mechanical picking.			
Sierra	2-year old	C2	35-45 2,70
Promising novelty. Fruits great and tasty. Among novelties this variety has abundant fructification. The fruits mature few days before Bluecrop.			
Bluegold	2-year old	C2	35-45 2,70
Early variety, classified as weakly growing. Proliferates easily, produces large flat fruit with green waxy bloom. Recommended for amateur cultivation.			

VARIETY	CONT.	HEIGHT	PRICE Euro
Chandler**** Sensational novelty! Huge, tasty, powder blue fruits about the diameter of 2-3 cm! Good point of this variety is great fructification. Fruits are ripening successively. It lasts for the period of bearing fruit from 4 till 6 weeks. He is starting in the fishing for the July and it is finishing in the second-half of August. Some sources are providing the considerably more late period of bearing fruit - till the middle of the September. It isn't fit for long keeping. Easily is surrendering to damaging in the transport. Straightened bushes, well branched. Height on average strong, about 150 cm. An insufficient resistance to frost can be a negative feature in Polish conditions what still requires observation.	2-year old	C2	35-45 2,70
Bluecrop**** Strong growth of shrubs up to 160-200 cm. Bally, loose habit. The shrubs with abundant fructification have a tendency to half-opening. Dark green foliage. Very fruitful variety [4-9 kg per shrub]. Great fruits [65 berries/0.25 l], bally, equal size in clusters, covered with very intensive wax coating. They are suitable for manual and mechanical picking. Compact, medium fragrant, vinous-sweet, greenish flesh. Bluecrop is medium early variety, fruit ripening in the middle of July. Good points of this variety are small sensibility to dry weather and sufficient hardness [-28°C to -34°C]. A bad point is the tendency to very abundant fructification.	2-year old	C2	35-45 2,70
Nelson**** NOVELTY! Very fertile, late maturing variety - about 1-2 weeks after Bluecrop variety. Growth of the shrub - strong, habit - dense. Fruit - very large, bright, slightly flattened, with an intense aroma, very well endures transportation. Variety distinguished by a high resistance to frost up to -34°C.	2-year old	C2	35-45 2,70
Meador NOVELTY! Very fertile variety of big strong growth, expansive habit and rigid stems. Fruit - very big, tasty, suitable for processing. Bears fruit in late July and early August. Variety known for a very high-frost resistance - up to -34°C.	2-year old	C2	35-45 2,70
Brigitta**** Australian variety. Strong growth of shrubs. Big, tasty, firm, with high quality fruits. The berries mature late but can be mechanically picked. They can be stored for a long time in a controlled conditions. Very promising variety, especially suitable for industrial plantings.	2-year old	C2	35-45 2,70
Darrow The variety ripening later than variety Bluecrop (from the end of July till the middle of August). Great flatted fruits covered with light wax coating. Compact, vinous-sweet flesh tastes good after ripening. Good point of this variety is great fructification. There is a danger during cold summers that some fruits will not ripen enough before the autumn slight frosts.	2-year old	C2	35-45 2,70
Elizabeth**** Variety valued in west of Europe for late maturing fruit. Found spiciest of varieties. Fruits maturing very profusely. Brown fruits. Recommended for industrial plantings. In Polish conditions the part of fruits can not reach maturity before slight frost. Bushes are growing strongly and widely.	2-year old	C2	35-45 2,70
Elliott**** Good point of this variety is great fructification. Strong and compact growth of bushes. Medium-sized, strongly waxen fruits. It is bearing fruit very late, from the half of the August. It can not manage the part fruits to mature on time. In the cold store it is keeping till two months! After long cooling however fruits are losing the taste. In spite of this fault, very much readily planted in the West. In Polish conditions is being still under testing.	2-year old	C2	35-45 2,70
Northblue (Vaccinium corymbosum x Vaccinium angustifolium) Semi-dwarf variety. Hybrid of low and high growing blueberry, grows up to 60-120 cm. Dark blue fruit, not too big but very sweet. Grows well even in not so favourable soil conditions. In view of the shrub's low requirements and small size, it is particularly suitable for planting on allotments. Recommended for cultivation in severe climatic conditions. Very high frost resistance.	2-year old	C2	30-40 2,70
North Country (Vaccinium corymbosum x Vaccinium angustifolium) The shrubs are the smallest in size of all blueberries. Height up to 45-60 cm. Dark-coloured fruit approximates with 1 cm in diameter. Resistant to low temperatures. Exclusively for amateur cultivation.	2-year old	C2	30-40 2,70
Pink Lemonade**** NOVELTY! Sensational novelty of pink fruit colour rare among high blueberry! The shrub grows slowly, grows up to 1.5 m in height. Habit - compact, very dense. Leaves oblong and glossy. Fruits small, sweet, and aromatic, in the maturing stage; assumes a dark pink colour. Late fruiting variety-in late August and early September, very fertile. Autumn Leaves turn from a golden to a red colour.	2-year old	C2,5	35-45 3,75

BLUE HONEYSUCKLE

(*Lonicera caerulea* L. var. *kamtschatica*)

Blue Honeysuckle is a fruity shrub native to north-eastern Asia, which is growing in popularity due to its health benefits and taste. Fruits are blue, oblong, sweet-sour, 3-4cm long, covered with wax coating. High fertility obtained 2-3kg of fruit from one shrub. For good fruiting you should plant at least 2 varieties side by side. Its fruits generous, very early (mid-May). The shrub has a high resistance to drought and extremely high frost resistance – over 40 degrees. Due to its low growth requirements and early fruiting, it is a promising alternative to American blueberry.

VARIETY	CONT.	HEIGHT	PRICE Euro
1-17-59 Russian variety of very large shrub, reaching over 2 cm long, with a sweet and sour taste, and long lasting. Variety of very high frost resistance.	C1,5	25-30	2,50

GOJI BERRY

(*Lycium barbarum*)

Wolfberry, popularly known as Goji berry, is a fruiting shrub of the nightshade family that produces small, oblong, red, edible fruit about 2cm long, of a bitter-sweet taste and after drying, sweet and sour. Goji berries are considered one of the healthiest fruits in the world. For thousands of years the healing properties of Goji berries have been used in traditional Chinese and Japanese medicine. It's fruiting in summer (August-September). Stems covered with thorns, leaves lanceolate, oblong, with a length of up to 10cm, grows to about 1-3m high. High frostresistance up to -30°C. It needs permeable soil, of a pH of neutral to slightly alkaline.

VARIETY	CONT.	HEIGHT	PRICE Euro
Korean Big Variety of big orange-red oval fruits, reaching 1.5-2cm long, sweet taste with a hint of bitterness. After drying, loses the bitter taste. Ripen from August to October. Leaves - light green, oblong, of length 6-10cm. Habit - dense; stems - limp.	C2	40-60	2,70
New Big One of the most popular varieties of Goji berry; of big, oval fruits reaching 1.5-2cm in length, sweet taste and an orange-red colour. The plants bear fruit at a very young age. The fruits ripen from August to October. Leaves - light green, lanceolate, of length about 6-10cm. Habit - dense; stems delicate and limp.	C2	40-60	2,70

SERVICEBERRY

(*Amelanchier lamarckii*)

Serviceberry is a kind of fruit-bearing shrub belonging to the family Rosaceae, naturally occurring in the areas of North America. Due to the taste and health qualities of the fruits as well as the decorative look of the shrubs throughout the year, they are very popular in Canada and are becoming a promising novelty in European countries. Fruits are mild in taste, sweet, purple and dark blue. It's fruiting from mid-June to mid-July. Habit loose, upright. Reaches about 2-5m in height depending on variety. The shrub is completely resistant to frost.
